

Cambridge International Examinations

Cambridge International General Certificate of Secondary Education

CHEMISTRY 0620/41

Paper 4 Theory (Extended)

May/June 2016

MARK SCHEME
Maximum Mark: 80

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the May/June 2016 series for most Cambridge IGCSE[®], Cambridge International A and AS Level components and some Cambridge O Level components.

® IGCSE is the registered trademark of Cambridge International Examinations.

Abbreviations used in the Mark Scheme

- ; separates marking points
- / separates alternatives within a marking point
- **OR** gives alternative marking point
- R reject
- I ignore mark as if this material was not present
- A accept (a less than ideal answer which should be marked correct)
- **COND** indicates mark is conditional on previous marking point
- owtte or words to that effect (accept other ways of expressing the same idea)
- max indicates the maximum number of marks that can be awarded
- ecf credit a correct statement that follows a previous wrong response
- () the word/phrase in brackets is not required, but sets the context
- ora or reverse argument

| Question | Answer | Mar | ks |
|----------|--|---------|----|
| 2(a) | number of moles of NaNO ₃ used: $3.40/85 = 0.04(00)$ (mol) OR $4.(00) \times 10^{-2}$ (mol); number of moles of O ₂ formed: $0.04/2 = 0.02(00)$ (mol) | | 3 |
| | OR 2.(00) × 10 ⁻² (mol); | | |
| 2/h\/;\ | volume of O_2 formed: $0.02 \times 24 = 0.48$ (dm ³); | | |
| 2(b)(i) | (a substance which is) a proton/H ⁺ /hydrogen ion acceptor; | | 1 |
| 2(b)(ii) | $Mg(s) + 2H_2O(I) \rightarrow Mg(OH)_2(aq) + H_2(g)$ $Mg(OH)_2$; rest of equation; | | 2 |
| 2(c) | M1 add a <i>named</i> acid, e.g. HC l and a named alkali, e.g. NaOH; M2 A l_2 O ₃ will react with/neutralises both reagents; M3 and so it will dissolve into the reagent/form a solution; | 1 1 1 1 | 3 |
| 2(d)(i) | covalent; | | 1 |
| 2(d)(ii) | any 2 from: high melting point/high boiling point; poor conductor (of electricity); hard; insoluble; | | 2 |
| 2(e)(i) | M1 (electrostatic) attraction; M2 between oppositely charged ions; | 1 | 2 |
| 2(e)(ii) | Ca ₃ (PO ₄) ₂ ; | | 1 |
