## READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a pencil for any diagrams or graphs.

Do not use staples, paper clips, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

Electronic calculators may be used.

You may lose marks if you do not show your working or if you do not use appropriate units. A copy of the Periodic Table is printed on page 28.

At the end of the examination, fasten all your work securely together. The number of marks is given in brackets [] at the end of each question or part question.

This document consists of **28** printed pages.

**1** Fig. 1.1 shows a root hair cell.

- Fig. 1.1
- (a) Use the letters A, B and C to label these parts of the root hair cell in Fig. 1.1.
  - **A** the cell membrane
  - B the part that contains chromosomes
  - C a structure that is not present in animal cells

[3]

For

- (b) Name two substances that are absorbed by root hair cells.
  - 1 \_\_\_\_\_ 2 \_\_\_\_\_

**3** (a) Fig. 3.1 shows a circuit used to measure the current passing through a resistor when the voltage across it is changed.

For Examiner's Use

 (b) Complete the sentences below using a word or phrase from the list. Each word or For phrase can be used once, more than once or not at all. Examiner's Use decreases increases stays the same is zero When the voltage across the resistor is reduced, the current through the resistor When the voltage of the supply is reduced, the voltage across the resistor When the voltage across the resistor is reduced, the resistance of the wire . [2] (c) The resistance of a piece of wire depends on a number of variables such as the temperature of the wire and the material from which it is made. State two other factors which affect the resistance of a piece of wire. 1 \_\_\_\_\_

2 [2]

© UCLES 2013

Soya beans are an important crop in Brazil. Soya beans contain a lot of protein, plus 4 smaller quantities of starch and fat. Examiner's (a) Describe how you could test a sample of soya beans to find out if they contain fat. [3] (b) Explain why protein is an important part of a balanced diet. [2] ..... (c) When a person eats soya beans, the beans are chewed in the mouth. Explain why this makes it easier for enzymes in the digestive system to digest the beans. [2] (d) Raw soya beans contain substances that stop protease enzymes from working. Cooking destroys these substances. Suggest how eating uncooked soya beans could prevent the absorption of some of the nutrients from them. ...... [2]

For

Use

(e) Large areas of rainforest have been cleared in Brazil, to provide more land for growing soya beans. Examiner's

Explain how cutting down the rainforest can harm the environment.

..... ..... [4] For

Use

**5** (a) A student placed four equally-sized pieces of different metals into colourless liquids contained in four test-tubes **P**, **Q**, **R** and **S**.

Fig. 5.1 shows what the student observed.

For

Examiner's Use

© UCLES 2013

(b) In the process of copper plating, a thin layer of copper is formed on the surface of a metal object.

11

For Examiner's Use

Fig. 5.2 shows the apparatus and materials that are needed to copper plate a metal key.

Fig. 5.2

Draw a diagram which shows how the apparatus and materials in Fig. 5.2 should be assembled so that the metal key will be copper plated.

[3]

(a) Fig. 6.1 gives information about the uses of different types of electromagnetic waves 6 and their effects on living tissue.

12

For Examiner's Use

Draw lines to link each electromagnetic wave with its effect on living tissue and its use. One has been completed as an example.

[4]

(b) Electromagnetic waves are transverse waves. Water waves are also transverse.

Draw a diagram of a transverse wave on the axes below. Label the amplitude and one wavelength on your diagram.

Please turn over for Question 7.

7 Ball pythons (royal pythons) are snakes that are kept as pets in many parts of the world.

The colour of a ball python is determined by its genes.

Some ball pythons are albino (white). This is caused by a recessive allele, **a**. The dominant allele, **A**, gives normal colouring.

(a) Complete Table 7.1 to show the possible genotypes and colours arising from this gene.

| genotype | colour |
|----------|--------|
| AA       |        |
| Aa       | normal |
|          | albino |

## Table 7.1

[2]

(b) State the correct biological term for the visible appearance produced by the genotype, in this case the colour of the snake.

[1]

For Examiner's Use (c) (i) Complete the genetic diagram to explain the results of crossing two snakes that are heterozygous for these alleles.

15

For

Examiner's Use **8** (a) Fig. 8.1 shows apparatus a student used to investigate the reaction between dilute nitric acid and excess calcium carbonate.

For Examiner's Use

Fig. 8.1

- (i) Name the gas that is given off in this reaction.
  [1]
  (ii) Describe how the student could test for the gas you named in (i). You may wish to complete the diagram in Fig. 8.1 to help you to answer this question.
  [2]
  (iii) At the end of the reaction the test-tube in Fig. 8.1 contains a solution of the compound calcium nitrate.
  State the general name for compounds like calcium nitrate which are produced when an acid reacts with a metal carbonate.
- (iv) The chemical formula of calcium nitrate is Ca(NO<sub>3</sub>)<sub>2</sub>.

State the total number of atoms and the number of different elements that are shown combined together in this formula.

| total number of atoms        |  |
|------------------------------|--|
| number of different elements |  |

[2]

16

(b) The student then carried out an investigation into the way that the rate of the reaction in(a) changed when he varied the concentration of the nitric acid.

Fig. 8.2 shows the apparatus the student used to measure the rate of reaction.

Fig. 8.2

The student measured the rate of reaction by finding how long it took for the gas syringe to fill with gas.

(i) After he had completed several measurements, the student wrote the following correct conclusion in his notebook.

| <br>Conclusion                              |
|---|
|   |
| The higher the pH of the dilute nitric acid |
| the longer it took for the gas syringe to   |
| fill with gas.                              |
|   |
|   |

Explain this conclusion briefly.

[2]

(ii) State **two** other variables that can affect the rate of reaction between dilute nitric acid and calcium carbonate.

| 1 | <br>    |
|---|---------|
| 2 | <br>[2] |

17

For

Examiner's Use **9** Fig. 9.1 shows a solar-powered golf cart used to carry golfers around a golf course.

Fig. 9.1

(a) As the cart moves around the course, the motion of the cart is measured.

(i) Write down the total distance covered in 60 s. [1]

|     | (ii)       | Calculate the speed of the cart between <b>B</b> and <b>C</b> .   | For<br>Examinar's |
|-----|------------|---|-------------------|
|     |            | Show your working.  | Use               |

|     |            |   |                   |
|     |            |   |                   |
|     |            | m/s [1]   |                   |
|     | (iii)      | Describe the motion of the cart between <b>D</b> and <b>E</b> .   |                   |
|     |            |   |                   |
|     |            | [1]   |                   |
|     | (iv)       | During another part of the journey, the cart is accelerating.   |                   |
|     |            | State whether the forces acting on the cart are balanced or unbalanced.   |                   |
|     |            | Explain your answer.  |                   |
|     |            |   |                   |
|     |            | [1]   |                   |
|     |            |   |                   |
| (b) | The<br>use | e cart is powered by solar cells on its roof. The solar cells produce electrical energy<br>ed to charge the rechargeable batteries in the cart. |                   |
|     | Nar        | me <b>one</b> other renewable energy resource that could produce electrical energy.   |                   |
|     |            | [1]   |                   |
| (c) | The        | e golfer hits a golf ball with his club. The ball flies through the air.  |                   |
|     | (i)        | State the form of energy given to the golf ball when the ball is hit.   |                   |
|     |            | [1]   |                   |
|     | (ii)       | State the form of energy gained by the golf ball as it rises into the air after being hit.  |                   |
|     |            | [1]   |                   |
|     |            |   |                   |
|     |            |   |                   |

(d) The mass of a golf ball is 45 g. The volume of a golf ball is  $36 \text{ cm}^3$ .

Calculate the density of the golf ball.

State the formula that you use and show your working.

formula

working

\_\_\_\_\_ g/cm<sup>3</sup> [2]

(e) (i) The head of the golf club is made of solid metal. The air that the golf ball is travelling through is a gas.

Complete Fig. 9.3 below to show the arrangement of particles in a gas. The diagram for a solid has been done for you.

[2]

For Examiner's Use

(ii) During the cart's journey, the temperature of the air in the tyres increases by 15 °C.

The volume of the air in the tyre remains the same.

Explain in terms of particles why the **pressure** of the air in the tyre increases when this happens.

[1]

| (iii) | Sometimes the golfer's hands begin to sweat.                | For |
|-------|---|-----|
|       | Explain in terms of particles how sweating cools his hands. | Use |
|       |   |     |
|       |   |     |
|       |   |     |
|       |   |     |
|       | [3]   |     |

For Examiner's Use (iv) Suggest how this will affect the rate of diffusion of carbon dioxide from the blood to the alveoli. Examiner's

| Explain your answer.        |       |
|-----------------------------|-------|
| effect on rate of diffusion | ••••• |
| explanation                 |       |
|                             | [2]   |
